*anytime from anywhere*  
on the Internet securely ”

## Corporate File Sharing Solution

### Empower your staff to work anywhere at any time

In today's age of fast and mobile Internet connectivity, employees are no longer bound to working at the office or just from 9 to 5. We find ourselves responding to customer's queries while waiting for an appointment, catching up on some reading over lunch or working from home at odd hours.

The possibilities are endless and it allows companies to be agile and more efficient.

However many companies are slow to respond to this shift and their competitors are gaining an edge over them by being able to respond to the customers faster. The companies that can respond faster, are most likely to keep existing customers and win over new ones.

AirBoxNow! allows employees to have access to their documents anywhere, on any device and any time: so they can respond faster.

### The BYOD Phenomenon

Started in 2009, employees have been bringing their smartphones & tablets to work. This "bring your own device" (BYOD) phenomenon offers a huge potential to organisations since these devices allow their employees to be

more productive. This phenomenon saves organisations huge amount of money since they do not need to invest in these hardware themselves.

In addition to bringing their own devices to work, employees are also taking matters into their own hands by utilising free file sharing services in order to access their documents on these devices. This is a result of many companies failing to provide the means for them to access these documents outside the office.

- ✓ Important documents are **ALWAYS** available **ANYWHERE**, to **EVERYONE** in the selected **GROUP**
- ✓ All documents can be optionally be **ON PREMISE/HOSTED**
- ✓ Shared **FILES** are **SECURED, ENCRYPTED** in storage of your choice
- ✓ All **CHANGES** are **VERSIONED** and **BACKUPED** automatically
- ✓ Mobile **NATIVE APPS** such as **ANDROID** and **IOS** supported
- ✓ Works on **ALL** platforms, **WINDOWS, MAC, LINUX**
- ✓ Powerful integrated **USER** sign-on with MailNow! 5 or ActiveDirectory
- ✓ Customised corporate **LOGO** and **SCREEN**
- ✓ Compatible with popular OpenSource cloud/host sharing by using the same core engine, AirBoxNow! engine inherits the stability and design of powerful open source product

Unfortunately many of these free file sharing services come with many problems and risks:

- Corporate files are being stored using personal file sharing account belonging to the employee. The IT department has no control over the account. The employee is free to share the document in whichever way he/she wishes to.
- Should the employee leave the firm, it is not possible for the organisation to terminate the account.
- There is no audit trail to keep track to whom a document is being shared with, or how many people the document is shared with.
- It is not obvious where the data is being stored, who has access to the physical server or whether the data is being replicated by the service provider.

AirBoxNow! solves all these problems and more. So it is time you empower your employees while keeping control of our data.

## About Us

InternetNow Sdn Bhd started its business in 1999. Our focus primarily is on Research & Development in the Internet arena. We have helped primarily the SMEs (Small & Medium-sized Enterprises) in Malaysia to get on the Internet using our locally developed solutions since the evolution of the Internet from dial-ups, ISDN and now the broadband.

Our forte is empowering our clients with productive Internet and providing protection against Internet threats with powerful system softwares that are affordable and strong after sales service.

Our key personnels come from highly specialized background of software development in the areas of security and communications. InternetNow is built on the foundation of strong emphasis in software development. Continuing in this tradition, we hire the best programmers and system engineers to ensure the best quality from development to implementation and all the way to clients' applications.

Partnering with InternetNow ensures you a peaceful state of mind knowing that you are guaranteed of technically competent and customers' oriented service. Excellent technical support and customers' satisfactions are our driving force.

- Our subsidiary, K-Now Sdn Bhd, sole distributor Kaspersky Anti-virus Corporate Malaysia
- Total of 50 staffs (2012)

### Without AirBoxNow!

### With AirBoxNow!

#### Scenario 1 – A distributed team of designers

A team needs to deliver a prototype by tomorrow morning. So everybody is burning midnight oil.

- Team members need to copy out latest project files to a USB thumbdrive to bring home.
  - When a team member updates one of the project files, he will need to email to the rest of the team. As more updates take place, multiple copies of the files are emailed back and forth, creating a nightmare in tracking the latest copy of the files.
  - Everybody has a copy of the project files.
- The team is able to effortlessly work until late at night from the comfort of their home by accessing the project's AirBoxNow! folder from home.
  - Team members can upload their latest files to the shared folder and the team can just access the folder for the latest copy of the project files.
  - A single, centralised, highly organised repository of the project files.

#### Scenario 2 – A busy always-on-the-move sales consultant

You are a busy sales consultant who is looking to maximise your time by meeting as many customers are possible.

- You have to transfer your latest pricing files, brochures and demo videos to your notebook and carry it around.
  - When a customer calls for information, you need to call back the office for the information, or search for the information from your notebook.
  - When the office releases a new version of pricing files or brochures, they will need to email to you and then you have to save those attachments to your notebook.
- Only carry your iPad or Android tablet and do your presentation straight from your tablet by accessing your personal files from your AirBoxNow! account
  - When a customer calls for information, you just need to access the file from your iPhone or Android smartphone and provide the answer on the spot.
  - The office can just update the latest pricing files and brochures on AirBoxNow! and you will automatically have the latest copy even when you are on the road.

#### Scenario 3 – Sharing large documents between offices

Company A is headquartered in Kuala Lumpur with plants in Penang and Kota Kinabalu. It also has offices in London and Tokyo.

- The plants in Penang and Kota Kinabalu send regular output reports to the other offices to update on the production status via email.
  - The HQ uses FTP to transfer large design files to London and Tokyo office. FTP is user-unfriendly and problematic behind certain firewall setups.
- The plants upload the reports to an AirBoxNow! folder which is shared with the other offices. All files uploaded are automatically backedup. Finding previous reports is simple.
  - The HQ uses AirBoxNow! to share large design files with London and Tokyo office. Everything is web-based making it effortless to use behind a firewall.
